# I-405/SR 167 Interchange Direct Connector Project

The I-405/SR 167 interchange in Renton, Washington is one of the most heavily congested interchanges in the state. Today, drivers experience congestion in this area for up to eight hours each day.

## What will WSDOT build?

WSDOT will build a new flyover ramp connecting the HOT lanes on SR 167 to the carpool lanes on I-405, improving flow at this critical interchange. The project will also reconstruct portions of nearby local streets, relocate a noise wall and add a raised earthen berm.

## What are the project benefits?

**Congestion relief and safety:** The project will reduce delays and weaving, as well as the likelihood of collisions. Drivers will no longer need to exit the carpool or HOT lanes, merge onto I-405 or SR 167, and merge across traffic again to the carpool or HOT lanes.

**Environment:** This project will relocate a noise wall, build storm water management facilities, and upgrade or replace a stream crossing at SR 167 to promote fish passage.

**Economic impact:** This project provides better transit access to affordable housing and employment centers, expands freight mobility to the Green River Valley cities' warehousing and distribution centers, and creates construction jobs in a variety of trades.

## What is the project schedule?

WSDOT has completed the project design and is purchasing right-of-way. The construction phase was funded in July 2015 through the Connecting Washington funding package.

**2016:** Construction begins

**2018:** Open to traffic
